## 2-Color Display High-Precision Digital Pressure Switch ZSE30A(F)/ISE30A Series

## Set Pressure Range and Rated Pressure Range

Set the pressure within the rated pressure range.
The set pressure range is the range of pressure that is possible in setting.
The rated pressure range is the range of pressure that satisfies the specifications (accuracy, linearity, etc.) on the switch.
Although it is possible to set a value outside the rated pressure range, the specifications will not be guaranteed even if the value stays within the set pressure range.

| Switch |  | Pressure range |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | -100 kPa | 0 | 100 kPa | 500 kPa | 1 MPa |
| For vacuum pressure | ZSE30A | $\begin{gathered} -101 \mathrm{kPa} \\ -105 \mathrm{kPa} \end{gathered}$ |  |  |  |  |
| For compound pressure | ZSE30AF | $\begin{array}{r} -100 \mathrm{kPa} \\ -105 \mathrm{kPa} \end{array}$ | , | $100$ $10$ |  |  |
| For positive pressure | ISE30A | $\begin{array}{r} -100 \mathrm{kPa} \\ -105 \mathrm{kPa} \\ (-0.105 \mathrm{MPa}) \\ \hline \end{array}$ | i |  |  | 1 MPa <br> 1.05 MPa |

## Analog Output

Functions (Refer to pages 41 and 42 for details.)

| Copy function | Copies the settings of the master sensor to the slave sensors. |
| :---: | :---: |
| Auto-preset function | This function is to calculate a rough set-value automatically based on the on-going operation. |
| Display calibration function | Evens out deviations in the displayed value. |
| Peak display function | Can retain the maximum pressure value displayed during measurement. |
| Bottom display function | Can retain the minimum pressure value displayed during measurement. |
| Keylock function (Selectable secret code) | The key board can be locked to prevent any incorrect function of the operation switch. |
| Zero-clear function | The pressure display can be set at zero when the pressure is open to the atmosphere. |
| Anti-chattering function | Prevents possible malfunction due to sudden fluctuations in the primary pressure by adjusting the response time. |
| Unit display switching function | Can convert the display value. |
| Power-saving mode | Reduces power consumption. |
| Display resolution-switch function | Converts display resolution from the normal value of $1 / 1000$ to $1 / 100$. It reduces the monitor to flicker. |
| $\mathbf{k P a} \leftrightarrow \mathrm{MPa}$ switch function | Converts the unit between kPa and MPa . |

## Function Details

The F $\square$ in ( ) shows the function code number. Refer to the Operation Manual for the details of operation procedures and function codes. Click here for details.

## A Copy function (F97)

The settings of the master sensor can be copied to the slave sensors, reducing setting labor and minimizing risk of mistakes in setting.
Can copy to up to 10 switches simultaneously.
(Maximum transmission distance 4 m )

## B Auto-preset function (F5)

1) The sensors are connected by a dedicated lead wire (ZS-38-5L (for master and one slave) or ZS-38-U (for master and up to 10 slaves)). Copying is performed through a dedicated communication line.
2) Select the slave switch which is to be the master, and change it into a master using the buttons. (In the default setting, all switches are set as slaves.)
3) Press the $S$ button of the master switch to start copying.

ZSE20 ISE2O

Auto-preset function, when selected in the initial setting, calculates and stores the set-value from the measured pressure.
The optimum set-value is determined automatically by repeating vacuum and break with the target workpiece several times.
Suction Verification

## C Display calibration function (F6)

Fine adjustment of the indicated value of the pressure sensor can be made within the range of $\pm 5 \%$ of the read value.
(The scattering of the indicated value can be eliminated.)

Note) When the display calibration function is used, the set pressure value may change $\pm 1$ digit.

Formula for Obtaining the Set-Value

| P_1 or P_2 | H_1 or H_2 |
| :---: | :---: |
| P_1 $\left(P \_2\right)=A+(A-B) / 4$ | $H \_1\left(H \_2\right)=\|(A-B) / 2\|$ |
| $n \_1\left(n \_2\right)=B+(A-B) / 4$ |  |

## D Peak/Bottom value indication

This function constantly detects and updates the maximum (minimum) value and allows to hold the maximum (minimum) pressure value.
When the $\Delta \nabla$ buttons are simultaneously pressed for 1 second or longer, while "holding", the held value will be reset.

## E Keylock function

Prevents operation errors such as accidentally changing setting values.

## F Zero-clear function

This function clears and resets the zero value on the display of measured pressure.
For the pressure switch with analog output, the analog output shifts according to the indication. The indicated value can be adjusted within $\pm 7 \%$ F.S. of the pressure when ex-factory. (ZSE30AF (for compound pressure) $\pm 3.5 \%$ F.S.)

## ZSE30A(F)/ISE30A Series

## Function Details

The F $\square$ in ( ) shows the function code number. Refer to the Operation Manual for the details of operation procedures and function codes. Click here for details.

## G Error indication function

| Error name | Error code | Description | Action |
| :---: | :---: | :---: | :---: |
| Overcurrent error | Eri | Load current of 80 mA or more is applied to the switch output (OUT1). | Eliminate the cause of the over current by turning off the power supply, and then turn on it again. |
|  | Eric | Load current of 80 mA or more is applied to the switch output (OUT2). |  |
| Residual pressure error | ErJ | During zero-clear operation, pressure over $\pm 7 \%$ F.S. is applied. (ZSE30AF (compound) $\pm 3.5 \%$ F.S.) <br> After 1 second, the mode will reset to measurement mode. $\pm 1 \%$ F.S. of the zero-clear range varies between individual products. | Perform zero-clear operation again after restoring the applied pressure to an atmospheric pressure condition. |
| Applied pressure error | H H - | Supply pressure exceeds the maximum set pressure. | Reset applied pressure to a level within the set pressure range. |
|  | LLL | Supply pressure is below the minimum set pressure. |  |
| System error | Eri | Internal data error | Turn off the power supply and then turn on it again. If the failure cannot be solved, please contact SMC for investigation. |
|  | ErH |  |  |
|  | ErE |  |  |
|  | Eri |  |  |
|  | Erg |  |  |
|  | ErI |  |  |

If the failure cannot be solved after the above instructions are performed, please contact SMC for investigation.

## H Anti-chattering function (F3)

A large bore cylinder or ejector consumes a large volume of air in operation and may experience a temporary drop in the supply pressure. This function prevents detection of such temporary drops in the supply pressure as an error.

| Available response time settings |
| :---: |
| $20 \mathrm{~ms}, 100 \mathrm{~ms}, 500 \mathrm{~ms}, 1000 \mathrm{~ms}, 2000 \mathrm{~ms}$ |

<Principle>
This function averages pressure values measured during the response time set by the user and then compares the average pressure value with the pressure set point value to output the result on the switch.

I Display unit switching function (FO)
Display units can be switched with this function.

| Display unit |  | PA |  | GF | bAr | PSi | inH |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| ISE30A <br> (Positive pressure) | 1 | 0.001 | 0.01 | 0.01 | 0.1 |  |  |

* The ZSE30A (vacuum pressure) and ZSE30AF (compound pressure) will have different setting and display resolution when the unit is set to MPa .

J Power-saving mode (F7)
Power-saving mode can be selected.
It shifts to the power-saving mode without button operation for 30 seconds. It is set to the normal mode (Power-saving mode is OFF.) when ex-factory. (Decimal points and operation indicator light (only when the switch output is turned ON.) blink in the power-saving mode.)

## K Setting of secret code (F8)

Users can select whether a secret code must be entered to release key lock. At the time of shipment from the factory, it is set such that the secret code is not required.
